Press Release

Applying Technology To Bridge Income Inequality

Houston, Texas, USA. Appropriate Development Technology (ADTINC) has been involved in promoting access to technology education to bridge income inequality.

During summer with the help of caring and dedicated volunteers, ADTINC had a very successful Technology Summer Camp teaching underprivileged kids (ages 9-13) STEM related courses so that they can become future engineers and scientists with the objective of breaking the cycle of poverty. *During the Technology Summer Camp students were taught 3D printing, drone technology and how to fly drones, computer programming, electronics and more.* Mayor Turner also visited during drone technology and flying

demonstration class. More pictures and information can be found at our website: www.adttechnical.org.

The objective of the organization is to provide access to latest and relevant technology throughout the year in libraries, YMCA and community centers in minority and disadvantaged areas to produce minority engineers and scientists in order to break the cycle of poverty.

As our experience indicate there are plenty of students in these communities who love to get such opportunities and create a bright future for them. If interested in learning, participating or supporting the program, please visit our website or contact ADTINC at adtinc00@yahoo.com.
